

**Term 1 - No anomalies**

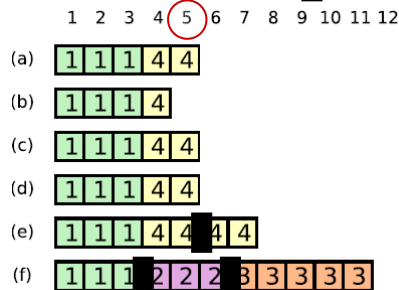

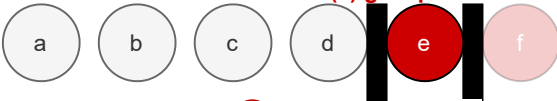

**Term 2 - (f) becomes the new leader  
But (f) gets partitioned directly after**

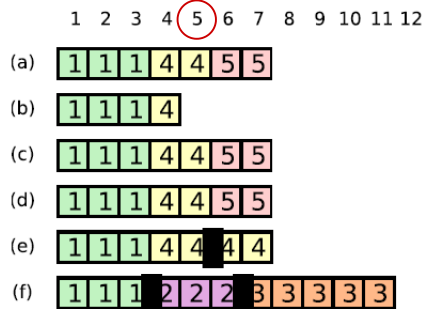

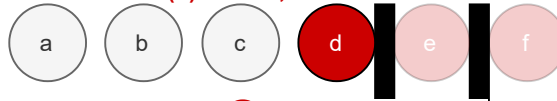

**Term 3 - (f) reconnects and quickly becomes  
the new leader, before getting partitioned again**

**Term 4 - (e) becomes the new leader  
Index 1 to 5 is committed. (e) gets partitioned**

**Term 5 - (d) becomes the new leader  
Because (b) is slow, there are no commits**

**Term 6 - (d) briefly disconnects  
Now, (c) is the new leader for the 6th term**
